THIRD QUARTER 1983 SEASONALLY ADJUSTED

INDIANA NONAGRICULTURAL EMPLOYMENT

Statewide nonagricultural establishment employment, seasonally adjusted, increased slightly from second quarter 1983. The over-the-year change was a minute decrease that is not statistically significant (a change of less than one-tenth of one per cent).

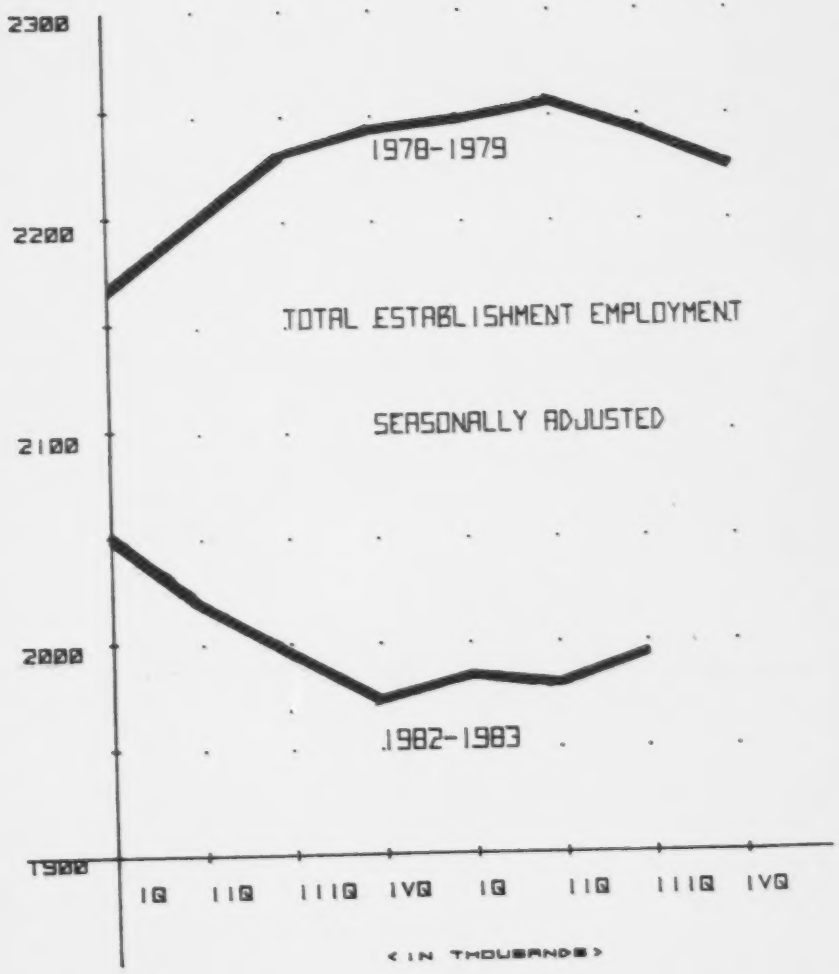
The perspective from the peak employment year of 1979 shows that the large number of jobs lost are being slowly regained. The third quarter 1983 employment was 244,500 below the third quarter 1979. However, there was an improvement over the second quarter's deficit which was 272,900 jobs. (See graph on next page.)

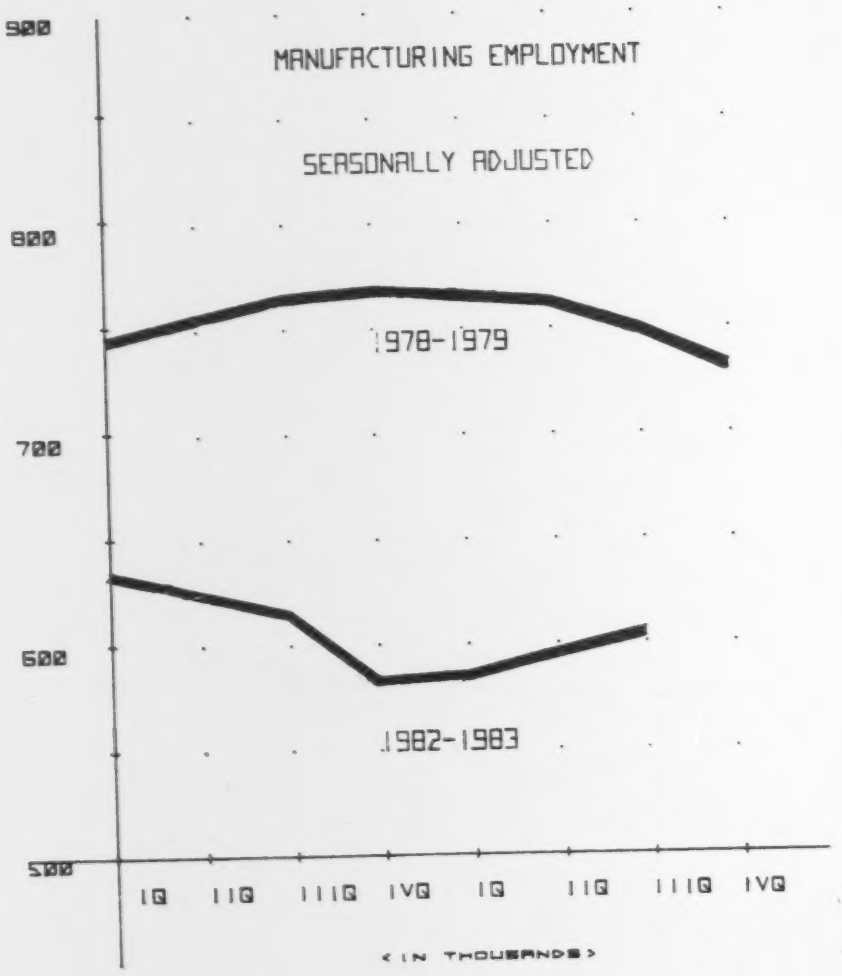
Both manufacturing and nonmanufacturing shared in the quarterly upturn with most of the employment gain in durable goods manufacturing. The small over-the-year loss was attributable to manufacturing declines overshadowing nonmanufacturing advances.

Manufacturing employment grew for the third consecutive quarter with almost all of the increase occurring in durable goods. Presently, total manufacturing has recovered 25,000 workers representing a 4.5 per cent gain since the end of the last year. Despite the restoration, manufacturing remained lower than a year ago and was off by 177,500 from third quarter 1978. (See graph on next page.)

Nonmanufacturing employment posted small gains both over the quarter and year. Most industry divisions registered increases from last quarter, except mining and government which was the largest loser. Government operations are still running on constrained budgets and employment loss through attrition is widely practiced. The overall rise in total nonmanufacturing from last year resulted chiefly because of growth attained in the services, government, and finance divisions. The total trade division was characterized by being both the largest loser over the year, but also the largest gainer over the quarter.

COMPARISON OF INDIANA TOTAL ESTABLISHMENT EMPLOYMENT AND MANUFACTURING EMPLOYMENT IN 1978-79 AND 1982-83





FOURTH QUARTER 1983 SEASONALLY ADJUSTED

INDIANA NONAGRICULTURAL EMPLOYMENT

Statewide nonagricultural establishment employment, seasonally adjusted, rose slightly from third quarter 1983 and increased moderately from fourth quarter 1982. The upturn from a year ago was the first addition to payrolls since third quarter 1981 posted a very small advance from third quarter 1980. The recovery has yet to gain back nearly a quarter million workers in order to match record high employment attained in 1979.

Both manufacturing and nonmanufacturing shared about equally in the upward movement over the quarter. Most of the increase over the year was attributable to an improving employment pattern in durable goods manufacturing industries.

Manufacturing employment grew for the fourth consecutive quarter. The bulk of the quarterly step-up was centered in the machinery and transportation equipment industries. From a year ago, almost all durable goods industries posted gains, while in nondurable goods, the addition in rubber and plastics contributed mainly to the overall hike.

Nonmanufacturing employment recorded small pluses both over the quarter and year. From third quarter 1983, government and services were the largest gainers, but these increases were offset partially by negative growth in wholesale and retail trade. This division also was the largest loser over the year, but this decrease was overcome by the gain in services.

INDIANA RANKS 48TH IN 1982 PAY INCREASE

The average annual pay of U.S. workers covered by State and Federal Unemployment Insurance (UI) programs was $16,732 in 1982, according to the Bureau of Labor Statistics. This represents a 6.6 per cent increase over the 1981 level.

While Indiana's annual average pay of $16,392 ranked 20th among the States and District of Columbia, it's per cent of increase was relatively low. A 4.3 per cent increase ranked Indiana 48th among the States and District of Columbia. Only three states recorded a lower rate of increase. Michigan was the only Great Lakes state with a lower per cent of increase. See table below for pay increases in nearby States as well as the United States.

Annual Average Pay for All Covered Workers, and Per Cent Change, United States and Great Lakes States, 1981 and 1982

	1981	1982	Per Cent Increase
United States	$15,690	$16,732	6.6
Indiana	15,712	16,392	4.3
Illinois	16,948	17,903	5.6
Ohio	16,319	17,155	5.1
Michigan	18,128	18,809	3.8
Wisconsin	14,790	15,674	6.0

SOURCE: Bureau of Labor Statistics

Nationally, average pay increases varied widely by industry. Finance-insurance-real estate industry received the largest percentage increase of 9.4 per cent in 1982 over the previous year to receive average pay of $17,890.

Industries where workers received increases similar to the overall average annual gain were transportation, communication and utilities (6.8 per cent), construction (6.6 per cent), manufacturing (6.6 per cent), and wholesale trade (6.3 per cent), all of which had 1982 average incomes in the $20,000-plus range.

Government	15,865	17,165	8.2	14,320	15,354	7.2

SOURCE: Bureau of Labor Statistics

The highest 1982 average pay was $27,626 paid in mining which increased 7.5 per cent. By contrast, the smallest increase of 4.8 per cent brought retail trade average pay to $9,568 in 1982.

Average wages and the per cent of increase in Indiana industries were lower than national rates except in construction. Indiana construction workers received average pay of $21,263, which was a 6.8 per cent increase, while national increase in construction rates was 6.6 per cent.

Indiana manufacturing workers received 1982 average pay of $21,835, which was 4.1 per cent higher than 1981. This rate of increase was lower than the 6.6 per cent national manufacturing rate of increase in 1982. The Indiana average manufacturing pay of $21,835 was $1,519 higher than the national manufacturing average.

Labor force data are based on place of residence and include all types of employment; non-agricultural wage and salaried, self-employed, domestics and farm workers.

Does not add due to rounding. (P - Preliminary)
Monthly estimates for the State and SMSAs are adjusted to new benchmark data at the end of each year.

1/ Initial claims are notices given by those losing jobs covered by UI programs that they are starting periods of unemployment. Those claimants who continue to be unemployed for a full week or more are then counted in the insured unemployment figure.

2/ Unemployment insurance for Federal Civilian Employees. To avoid duplication, excludes claims from Federal workers with both Federal and State wage credits.

3/ Unemployment insurance for Ex-Servicemen. Excludes claims filed jointly with other programs.

4/ New Extended Benefit Period began January 16, 1983 and ended April 30, 1983.

* Not published to avoid disclosure of individual firm data.

Covered Employment includes employees working for firms subject to the Indiana Employment Security Act. The Act, in general, includes employers with one or more employees. Excluded are railroads, small non-profit institutions and churches. Beginning with January 1, 1978, all state and local government employment, including that in schools, is covered. Accredited private and parochial school employment is also covered. However, only part of the employment in private households and on farms is included in the expanded coverage.

Average weekly earnings are computed from the quarterly earnings and average employment of all employees in establishments covered by the Act. The figures are computed from total payrolls so they include all employees--janitors, company officers, factory workers, office employees--instead of only production workers. The new coverage in 1978 affects the all covered employment average so these averages are discontinuous from those calculated for prior years.

*Not published to avoid disclosure of individual firm data.

Covered Employment includes employees working for firms subject to the Indiana Employment Security Act. The Act, in general, includes employers with one or more employees. Excluded are railroads, small non-profit institutions and churches. Beginning with January 1, 1978, all state and local government employment, including that in schools, is covered. Accredited private and parochial school employment is also covered. However, only part of the employment in private households and on farms is included in the expanded coverage.

Average weekly earnings are computed from the quarterly earnings and average employment of all employees in establishments covered by the Act. The figures are computed from total payrolls so they include all employees--janitors, company officers, factory workers, office employees--instead of only production workers. The new coverage in 1978 affects the all covered employment average so these averages are discontinuous from those calculated for prior years.

1983 INDIANA NONAGRICULTURAL EMPLOYMENT

SEASONALLY ADJUSTED

The seasonally adjusted nonagricultural establishment employment in Indiana increased through most of 1983, ending with a gain of 50,500 through first quarter 1984. After having fallen slightly between the first two quarters of 1983, employment rose successively in the remaining quarters through the initial quarter of 1984.

Most of the yearly addition in payroll employment was contributed by an economic recovery in manufacturing. From the first quarter 1983 to the first quarter 1984, every major durable goods industry posted an advancement which was led by transportation equipment. Nondurable goods largest gainer for the year was rubber and plastics.

Nonmanufacturing employment increases were smaller through the quarters when compared to manufacturing, but these industry divisions are more resistant to an economic slump than goods producing industries. The yearly employment comparison on pluses and minuses of nonmanufacturing divisions were mixed. The service category was at the head of gainers, while construction was the largest loser.

FIRST QUARTER 1984 SEASONALLY ADJUSTED

INDIANA NONAGRICULTURAL EMPLOYMENT

Statewide nonagricultural establishment employment continued to improve moderately from both the first and fourth quarters 1983. The current gain represented the third consecutive quarterly increase. However, the present level of employment was still more than two hundred thousand below the record high second quarter 1979.

Manufacturing employment rose both over the quarter and year as durable and nondurable goods industries contributed to the overall upturn. The current boost in employment marked the sixth consecutive quarterly advance in manufacturing. Since the recessionary low in the fourth quarter 1982, manufacturing industries have added back to their payrolls nearly fifty thousand workers.

In durable goods, the largest gainers from both quarter and year ago comparisons have been the transportation equipment and machinery industries. Also, the industries associated with building construction; that is, lumber, furniture, stone-clay-glass, have shown improvement. Only steel mills' employment recorded losses in both time frame comparisons. In nondurable goods, rubber and plastics, which is very sensitive to auto industry production, led the upturn in that sector.

Nonmanufacturing employment increased by about the same amount both over the quarter and year. Wholesale and retail trade contributed most of the gain between fourth quarter 1983 and first quarter 1984. Over the year, services and retail trade led the gainers, while contract construction suffered the greatest setback.

JOB SERVICE MATCHES PEOPLE AND JOBS

by Jean Kaufman

Computer: An electronic machine which, by means of stored instructions and information, provides rapid, often complex calculations or compiles, correlates and selects data.

With that definition in mind, Central Indiana job seekers now have a unique opportunity to match their education, skills and desires with opportunities in the area. The ten local offices of the Indiana Employment Security Division in the Greater Indianapolis area have vaulted into the computer age with a fury that is expected to pay huge dividends to employers and applicants alike.

The skilled, professional interviewers in each of the ten offices have added to their work skills computer operation. Key words, batching data imput and numerous other new phrases have enriched their vocabularies. But the real enrichment comes to the general public who will have access to all job listings in the area for which they meet the qualifications. File selection as it has been known since the inception of Job Service will be a thing of the past, replaced by the computer.

The ten local offices that are sharing common job opportunities include Downtown at 25 West Georgia Street, Augusta at 71st and Michigan Road, Castleton in the Castleton Plaza Shopping Center, Linwood at 4171 Millersville Road and Southtown, 509 East National Avenue. Three suburban south communities also included in the computer Job Service effort are Franklin, 600 Banta Ave.; Martinsville, Martinsville Plaza, and Shelbyville, 23 East Broadway.

Adoption of the Job Service Matching System (JSMS) moves the Division into a new era of the way it does business. Under the system, which calls for the eventual development of statewide computer job matching, the unregistered job seeker stops by a Job Service office and is interviewed by a staff member. Forms are filled out summarizing the applicant's work history, education, job goals, experience, abilities and skills.

This information is coded and fed into the computer, kept on file and matched against every job order placed in the system. The job orders are received from employers who call or stop by the local office and give the educational, skill and experience requirements of the job.

Although the computer is seen realistically as nothing more than an aid to human effort in the job matching process, it is capable of a superhuman search on behalf of every job applicant whose profile is storedin the computer. In just seconds, every applicant on file can be screened against every job opening. The screening is done each day so that the applicant who is not matched is considered for all new jobs that are fed into the computer each day.

Employers benefit from JSMS as their job openings are filled faster with the best qualified "computer-picked" applicants. For example, if an employer wants to talk to ten individuals who meet job requirements, the computer will select the ten most qualified candidates first and those individuals are notified of the position and referred to it if they are interested.

Currently, entering all the Indianapolis job seekers into the computer is a time-consuming process. Ultimately, it will be far more efficient,not only for Job Service, but more importantly for the job seeker and the prospective employer.

No Consumer Price Index (CPI) is produced by the Bureau of Labor Statistics for Indiana, or any Indiana cities. CPI series for several cities are published, including the ones listed here.

* CPI-U Series, beginning January 1983 changed the way home owner costs are measured to rental equivalence - based on implicit rent owners would have to pay to rent homes they own.

\+ Seasonally adjusted per cent change.

Labor force data are based on place of residence and include all types of employment; nonagricultural wage and salaried, self-employed domestics and farm workers.

Does not add due to rounding. (P-Preliminary)
Monthly estimates for the State and SMSAs are adjusted to new benchmark data at the end of each year.

*Not published to avoid disclosure of individual firm data.

Covered Employment includes employees working for firms subject to the Indiana Employment Security Act. The Act, in general, includes employers with one or more employees. Excluded are railroads, small non-profit institutions and churches. Beginning with January 1, 1978, all state and local government employment, including that in schools, is covered. Accredited private and parochial school employment is also covered. However, only part of the employment in private households and on farms is included in the expanded coverage.

Average weekly earnings are computed from the quarterly earnings and average employment of all employees in establishments covered by the Act. The figures are computed from total payrolls so they include all employees--janitors, company officers, factory workers, office employees--instead of only production workers. The new coverage in 1978 affects the all covered employment average so these averages are discontinuous from those calculated for prior years.

Covered Employment includes employees working for firms subject to the Indiana Employment Security Act. The Act, in general, includes employers with one or more employees. Excluded are railroads, small non-profit institutions and churches. Beginning with January 1, 1978, all state and local government employment, including that in schools, is covered. Accredited private and parochial school employment is also covered. However, only part of the employment in private households and on farms is included in the expanded coverage.

Average weekly earnings are computed from the quarterly earnings and average employment of all employees in establishments covered by the Act. The figures are computed from total payrolls so they include all ~~employees--janitors, company officers, factory workers, office employees--instead of only~~ production workers. The new coverage in 1978 affects the all covered employment average so these averages are discontinuous from those calculated for prior years.
